This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1 1. (canceled).
- 1 2. (currently amended) Custom moulded ear plug The device
- 2 as in claim 8 or 9 1, characterized in that, over its length,
- 3 the channel features varying cross-sectional dimensions or
- 4 shapes.
- 1 3. (currently amended) Custom moulded ear plug The device
- 2 as in claim  $\frac{1}{1}$  or  $\frac{1}{2}$ ,  $\frac{1}{2}$ , or  $\frac{1}{2}$ , characterized in that a matching
- 3 stub line serving for the tuning of the acoustic transmission
- 4 properties between the coupling port opening and the input or
- 5 output extends into the said channel and is itself bounded by
- .6 the material of the custom moulded ear plug shell.
- 1 4. (currently amended) Custom moulded ear plug The device
- 2 as in one of the claims  $\frac{1}{1}$  to 2,  $\frac{8}{1}$ , or  $\frac{9}{1}$ , characterized in
- 3 that, over at least a substantial segment of its length, the
- 4 channel extends essentially parallel to the outer surface of
- 5 the <del>custom moulded ear plug</del> device.
- 1 5. (currently amended) Custom moulded ear plug The device
- 2 as in one of the claims  $\frac{1}{1}$  to 2,  $\frac{8}{1}$ , or  $\frac{9}{1}$ , characterized in that
- 3 the custom-moulded ear plug device is a custom-moulded hearing
- 4 aid.
- 1 6. (currently amended) Custom moulded ear plug The device
- 2 as in one of the claims  $\frac{1}{1}$  to 2,  $\frac{8}{1}$ , or  $\frac{9}{1}$  characterized in that
- 3 the <del>custom moulded car plug</del> device is an a custom-moulded, in-
- 4 the-ear hearing aid and that the channel is part of a venting
- 5 system for the ear drum.

- 7. (currently amended) Custom moulded ear plug The device
  as in one of the claims 1 to 2, 8, or 9, further comprising
  another channel, characterized in that at least certain
  segments of at least two of the signal carrying said channels
  extend[[s]] in parallel fashion.
  - 8. (new) A hearing device comprising at least one of an 1 acoustical/electrical converter and an electrical/acoustical 2 converter respectively with an acoustical input or output, 3 said input or output respectively being linked to a coupling 4 opening at the outer surface of said device via a channel, at 5 least a part of said outer surface of said device being formed 6 by a one-part shell of said device defining an inner space, 7 said channel being provided within and along said part of said 8 shell and being formed within the material of said shell. 9

- 9. (new) A hearing device comprising:
- a one-part shell forming at least a portion of an outer surface of said device, said shell defining an interior space of said device, said shell forming a channel out of the material of said shell, said channel being formed within and along said shell; and
- at least one of an acoustical/electrical converter and an electrical/acoustical converter including an acoustical input or output, respectively, wherein said input or output is acoustically linked to a coupling opening via said channel.
- 10. (new) A hearing device comprising:
  - a one-part shell forming at least a portion of an outer surface of said device, said shell defining an interior space of said device, said shell forming a channel out of the material of said shell, said

## Appl. No. 09/669,042 Amdt. Dated September 25, 2000 Reply to Office action of September 11, 2003

6	channel being formed within and along said shell
7	and, over at least a substantial segment of its
8	length, said channel running essentially parallel to
9	said outer surface; and
10	at least one of an acoustical/electrical converter and an
11	electrical/acoustical converter including an
12	acoustical input or output, respectively, wherein
13	said input or output is acoustically linked to a coupling
14	opening via said channel, and further wherein
15	said channel is tuned to have specific acoustical
16	characteristics.
